

ATTENTION

All log furniture is subject to a natural process called **Checking**. As wood releases moisture, Checking can occur across or through its annual growth rings. This is a normal result of wood seasoning. Checking can range from very slight slivers to cracks running the full length of the log; to the heart of the wood. This does not affect the wood's structural performance or integrity.

For more information, visit www.cedarlooks.com/checking

ATTENTION

Tous les meubles en rondins sont sujets au phénomène naturel des fentes, qui apparaissent lors du séchage du bois. Elles sont toutefois superficielles et ne réduisent en rien la solidité du bois. Pour plus d'informations, visitez www.cedarlooks.com/fente
