

STEELHEAD

Pen-Track SOLID STEEL SLUG
Field load $1\frac{1}{16}$ oz / 300 gr.

NEW!
20 GA 2 $\frac{3}{4}$ "

A completely new solid slug design provides excellent penetration capabilities suitable for big game hunting. The Steelhead slug is designed for hunting in overgrown areas where increased stability and resistance against obstacles is necessary.

POLYMER BEARING BANDS

Low friction polymer bearing bands prevent contact with the bore and damage to choke surfaces

SMOOTH AND RIFLED BARRELS

Slug design suitable for both smooth bore and rifled barrels, any type of choke

SHARP EDGES

Sharp edges provide reduced ricochet as slug cuts through the obstacle without deviation

FIELD LOAD

Powerful load and $1\frac{1}{16}$ oz slug provide maximum energy on target

AERODYNAMIC SHAPE

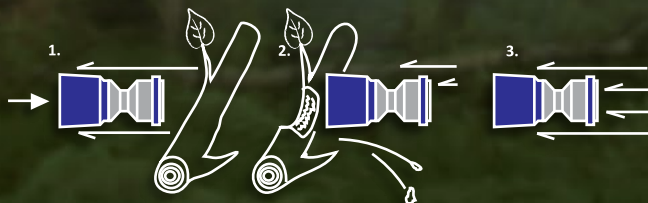

Advanced aerodynamically balanced shape assures stability and accuracy

POLYMER WAD COLUMN

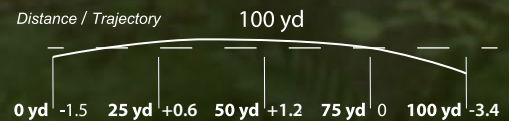

Durable, one-piece wad column seals off hot propellant gasses then travels with slug adding its weight to the impact energy

SOLID STEEL CONSTRUCTION

Assures deep penetration and maximum energy transfer with high retained weight

1. There are obstacles in the way of slug
2. During penetration of obstacles slug is deflected from the balanced position
3. Stabilizing surfaces turn the slug back in the initial direction
