CURADO 200

Forged from over 30 years of Curado performance and durability, the new Curado 200 M inherits the latest Shimano reel technologies to provide ultimate castability with heavier lines and lures in any power fishing situation. Expanded line capacity comes without compromise as the Curado 200 M now leverages Shimano's MagnumLite (MGL) Spool III to reduce start-up inertia for unparalleled casting performance, especially when targeting trophies with large paddle-tail swimbaits, big jigs, deepdiving cranks, oversized frogs, Carolina rigs or umbrella rigs. The addition of SilentTune technology improves spool quietness during casts. SVS Infinity technology provides precision casting performance with easyto-manage and consistent spool control and brake force adjustments when faced with demanding conditions or switching between baits. The aluminum HAGANE Body provides added rigidity to increase cranking power and overall reeling efficiency, while MicroModule Gear, Cross Carbon Drag and X-Ship deliver the tournament-tested smoothness, durability, and versatility for which the Curado family is known. Expanding on Curado's reputation as a do-everything reel, Shimano redesigned and refined the versatile Curado 200 M to be all about big casts on big line with big baits for one thing — big fish.
