

Muddy Trifecta™ 180 Cellular Trail Camera – MUD-TRF180

Short copy: Experience the equivalent of three cameras worth of coverage in a single device. The Trifecta 180 Cellular Trail Camera combines 180-degree motion detection with an 80-ft. detection and flash range to capture and deliver broad panoramic-style photos and videos of its surroundings by utilizing its three independent PIR sensors to break the area into three distinct zones. When triggered, the camera responds immediately, quickly rotating its lens so it's situated in the zone where the movement was detected and then sends the resulting high-quality images and videos directly to any mobile device via the Command Pro app*. The Trifecta 180 offers users two setting options, including single-zone capture and 180-zone capture, making it ideal for use on fence lines, field edges, transition areas, and more.

Long copy: The Trifecta 180 Cellular Trail Camera provides outdoorsmen with an immersive experience equivalent to three cameras worth of coverage in a single device for unparalleled visibility in the field, both day and night. Combining 180-degree motion detection with an 80-ft. detection and flash range, this trail cam captures and delivers broad panoramic-style photos and videos of its surroundings by utilizing three independent PIR sensors to break the area into three distinct zones. When triggered, the camera responds immediately, quickly rotating its lens so it's situated in the zone where the movement was detected and then sends the resulting high-quality images and videos directly to any mobile device via the Command Pro app*. And, when it comes to capturing photos and videos, the Trifecta 180 offers users two setting options, including the:

- **Single-zone capture setting:** Takes one photo or video of the triggered zone only, as most traditional trail cameras do.
- **180-zone capture setting:** Takes three photos by rotating across three unique zones to create a panoramic-style image of the area—making it ideal for use on fence lines, field edges, transition areas, and more.

Additionally, the Command Pro app, a state-of-the-art platform with industry-exclusive features, provides access to the On Demand function, enabling real-time photo and video captures of your hunting spots with just the push of a button. And, since cellular reception can be problematic in the most remote areas of your property, this trail cam comes with our Automatic Network Coverage feature, which is ready to go, thanks to two pre-installed SIM cards. Once activated, the camera selects the strongest cellular signal, Verizon or AT&T, and connects automatically, providing uninterrupted communication with your mobile device, 24/7. From its high-resolution 36MP imaging and rich 1080P full HD video with audio to the 0.4-second trigger speed and 80-foot detection and flash range, you can count on this cam to cover all your prime hunting areas.
